Professional Summary

Aspiring full-stack developer with extensive experience in backend development using Node.js and frontend development with React. Skilled in teaching computer science and programming concepts, with a focus on delivering engaging lessons in web development, database management, and machine learning. Proficient in building scalable web applications using the MERN stack, with a strong focus on the Patriot Pulse project, a comprehensive platform for U.S. election management. Passionate about delivering impactful solutions and continuously enhancing expertise in full-stack development.

Technical Skills

- **Backend:** Node.js, Express
 - **Frontend:** React.js, HTML, CSS, JavaScript, Next.js
 - **Database:** NoSQL (MongoDB), SQL (PostgreSQL, MySQL)
 - **Version Control:** Git, GitHub
 - **Machine Learning:** Python, Deep Learning, Data Analysis
 - **Deployment & Platforms:** AWS (EC2, RDS, S3 Bucket, CloudFront), Linux, Vercel
 - **Teaching Tools:** Jupyter Notebook, Visual Studio Code, Online IDEs, Learning Management Systems
-

Experience

Full Stack Software Engineer(Intern)

Hivecraft Tech Pvt Ltd, Nepal

March 2024 – August 2024

- Worked exclusively on **Patriot Pulse**, a web-based platform designed to streamline U.S. election processes, managing campaign creation, fundraising, candidate profiles, and personalized pages.
- Developed and maintained features for user management (voters, donors, vendors, volunteers), secure authorization, and role-based access control using Node.js, Express, and React.
- Implemented puck editors for dynamic content updates and integrated advanced analytics for tracking campaign performance and user activity.
- Contributed to database integration with MongoDB and PostgreSQL, ensuring efficient data handling and secure access.

- Collaborated on third-party integrations to enhance platform functionality and improve user experience through intuitive admin UI.

Node.js Developer Intern

SiliconTech Nepal, Thimi

April 2023 - September 2023 (months)

- **E-commerce Platform:** Developed the backend for a single-vendor e-commerce platform using Node.js and Express. Implemented features like a gems-based reward system, Esewa payment integration, and secure authentication/authorization.
- **Task Management System:** Contributed to a project bidding platform similar to Upwork, designing backend logic for bid management and project tracking.
- **Student Management System:** Created a student management system with features like student registration, course enrollment, and grade management. Developed dynamic APIs to support CRUD operations and role-based access control.

Education

Bachelor in Computer Science and Information Technology (BSc.CSIT)

Samriddhi College, Lokanthali

2077 – 2081 | Overall percentage – 83% (8 semesters)

Intermediate Level (Science)

CCRC, Balkumari

2074 – 2076 | CGPA: 3.59

Projects

Patriot Pulse

- A modern web-based platform for managing U.S. election processes, including campaign creation, fundraising, and user management (voters, donors, vendors, volunteers).
- Developed secure authorization, puck editors for content management, and advanced analytics dashboards using the MERN stack.
- Integrated third-party tools and optimized database interactions with MongoDB and PostgreSQL for efficient data handling.
- Designed intuitive admin UI for streamlined campaign and user management, enhancing platform usability.

E-commerce Platform

- Independently built using React.js for the frontend, Express for the backend, and RESTful APIs for data communication.
- Integrated Stripe for secure payment processing and implemented JWT for authentication/authorization.
- Designed a modern, responsive UI with Material UI and developed an admin dashboard for managing products, orders, and users.

Sticky Note App

- Created a simple sticky note application using React.js with drag-and-drop functionality and local storage integration.
- Deployed on Vercel: Sticky Note App.

CV Builder App

- Developed a CV builder web app using React.js and Material-UI, featuring real-time preview and PDF download options.
- Deployed on Vercel: CV-Builder-Site.

E-bidding Web App (Ongoing)

- Developing a secure e-bidding platform with real-time notifications and robust bidding logic.
- Includes a user-friendly dashboard for managing bids and monitoring project progress.

Todo App

- Built a Todo application using the MERN stack, focusing on CRUD operations and GraphQL for efficient data management.
- Emphasized an intuitive user interface for task creation, updating, and deletion.

Machine Learning Projects

- **Customer Churn Prediction:** Implemented deep learning models to predict customer churn for a telecommunications dataset, improving retention strategies.
- **5G Service Prediction:** Developed ML models to predict potential 5G service areas, optimizing network coverage planning.

Awards & Certifications

- TECHTRIX Hackathon Participation Certificate
- CISCO Networking Certificate
- NEXT.js Training Certificate
- Broadway MERN Stack 3-month Course Completion Certificate

Languages

- **Nepali:** Native
- **English:** Proficient
